

OPEN TANKS WITH LEGS, OPEN TANKS WITHOUT LEGS

The open tanks are suitable for the storage of wine and liquid foodstuffs (e.g. fruit juices, milk and oil). They are made of stainless steel W.No. 1.4301 BA (AISI 304 – V2A). The inner floating lid allows the volume to be adapted according to the clients needs. Wine-oxidation is prevented by tightening the floating lid by means of the inflatable gasket which is blown by the enclosed pressure pump and manometer. Our standard production program involves open tanks with legs and without legs. The upper coat edge is additionally strengthened to assure greater tank stability. Larger open tanks with legs are equipped with a crane and pulley for easy floating lid lifting. Optionally, the tank can be equipped with an oval or rectangular manway (welded), with a cooling jacket or other accessories.

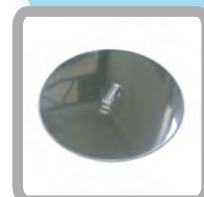

Racking port

Sampling valve DN20

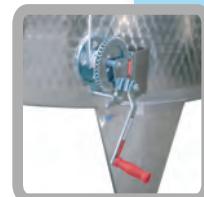

Floating lid

Dust protection lid

Crane for floating lid

Pulley
